

Ramiz Dundar

ramiz.dev | +1 (339) 231-3211 | Sunnyvale, CA
ramizdundar@gmail.com | linkedin.com/in/ramizdundar | github.com/ramizdundar

SKILLS

Languages: Java, Python, C++, Golang, Bash, C, SQL

Tools: Git, Docker, Swarm, Kubernetes, gRPC, AWS, Jira, Jenkins, Linux, PyTorch, Google Cloud

Expertise: Distributed Systems, Scalability, Stream Processing, In Memory, Low Latency, Computer Vision, NLP, MCP, OAuth, Observability

EXPERIENCE

Google - Cloud AI

Dec 2024 – Present

Software Engineer | Java, C++, TypeScript, Go

Sunnyvale, CA

- Enabled 30+ connectors (toward 40+) to onboard Gemini Enterprise in under two months by co-architecting the Declarative Framework that generates MCP servers from a single textproto.
- Improved Gemini Enterprise control plane provisioning reliability and scalability, transitioning from customer-provided OAuth apps to Google-managed OAuth apps and expanding support for 10+ connectors.
- Owned observability for Gemini Enterprise connectors, designing cross-project log transfer pipelines, defining metrics/SLOs, and building dashboards (including billing) to improve monitoring and debugging.

Brown University

Dec 2023 – Dec 2024

Research Assistant (Paid) | Python, Go

Providence, RI

- Accepted to NSDI 2026 (Primary Author): Achieved a 20x average speedup across 77 bash scripts on a 30-node cluster by leading a team of 4 to build Fractal, a fault-tolerant distributed system for parallel script execution.

Hazelcast

Dec 2020 – Jul 2023

Software Engineer (Promoted to SE II) | Java

Remote

- Promoted as the youngest member of the core team (with a ten-year gap to the next youngest) in recognition of critical contributions to integrating the stream processing engine into the main product.
- Improved the throughput of a distributed in-memory key-value store by up to 40% and benchmarked using our internal simulator with Terraform on AWS, by rewriting code to implement a thread-per-core architecture.
- Accelerated replication speed by 3x across two AWS regions by parallelizing serial replication logic.
- Led teams to secure 1st and 3rd places in Hazelcast's hackathons in 2022 and 2023, earning a total of \$2400 in prizes by developing a Jenkins test failure analysis framework and integrating the QUIC transport layer protocol.

Pragmacraft

Jul 2019 – Dec 2019

Machine Learning Engineer | Python, PyTorch

Istanbul, Turkey

- Developed and presented a browser extension that generates concise web page summaries, similar to Google's featured snippets, at Turkey's second-largest bank's research center, using a combination of extractive and declarative summarization techniques with Google's Sentence Encoder.

EDUCATION

Brown University | MS in Computer Science | 4.0 GPA

Expected May 2026

Bogazici University | BS in Computer Engineering | 3.8 GPA | Ranked 4th out of 89

Jun 2021
